

„Czech - Austrian Magnetic Resonance Workshop 2019“
(Project number: 84p6)
Feedback from participants

„The workshop in Frein was a great experience! Knowing colleagues from different institutions and acquainting with their work in a friendly atmosphere was a valuable contribution to my PhD study that broadened my horizon.“ (D. Bencikova, PhD Student, MUW)

“I very much enjoyed the workshop and the scientific insights it provided to me. Additionally, this was the first time I've ever held a presentation in front of an international audience and as such it was a very valuable experience for me. I'd definitely participate again. (P. Lazen, PhD Student, MUW)

“The Austrian-Czech workshop was a very successful event. During this three days retreat, which was packed with brilliant scientific presentations, offered a unique opportunity for meeting central European MR researchers and industry partners.“ (A.I. Schmid, Ass.Prof., MUW)

„The Czech-Austrian MR Workshop is the perfect opportunity to learn more about research focuses of other groups in the Czech Republic or Austria and to strengthen the collaboration between labs. Besides pursuing collaborative projects, I can personally benefit from practicing my presentation skills, I can share some ideas concerning my ongoing PhD project and discuss about it. There is also the possibility to get an accreditation of this workshop at my home university (Université Paris-Sud).“ (L. Nohava, Ph.D. Student, Wien/Paris)

“The Austrian-Czech workshop was the first conference where I had the chance to present my ongoing master thesis. It was a great opportunity to practice a talk in front of an interested group and clarify emerging questions. The workshop also is a good occasion get to know colleagues and their research topic and I am glad that there was enough time for discussions with them.“ (M. Obermann , B.Sc., Graz)

“The workshop "Czech-Austrian Magnetic Resonance Workshop 2019" provided me great opportunity to meet colleagues from same researcher field and discuss several problems such as motion artefacts or limitations of preclinical research.“ (E. Drazanova, Ph.D. Student, Brno)

“For me, the workshop was a useful overview of the up-to-date techniques focused on MR imaging and spectroscopy. I enjoyed the talks focused on radial k-space sampling and reconstruction. Recent trends were shared between multiple research groups in a very friendly atmosphere. The venue of the workshop was selected in beautiful nature.“ (O. Macicek, Post Doc, Brno)

"Thank you for another very well organised CZE-AUT meeting! The workshop featured lots of interesting talks and helped to keep up to date on the research of the colleagues from Prague, Brno, Vienna, Innsbruck and Graz. As a PhD student, I appreciated the opportunity to present my work to the MR community in a friendly atmosphere and learn from questions and comments. Furthermore, I think the venue was an excellent choice." (C. Kräuter, Ph.D. Student, Graz)

"The CZE-AUT MR Workshop gives the opportunity to get to know different research groups and their work. You can discuss topics that you are interested in, share ideas and different approaches and network." (R.Czerny, Master Student, Wien)

"I am PhD student from the Neuroimaging department in Graz in his fourth here and I have joined all the CZE-AUT workshops since that. The meeting offers the possibility to meet and talk with MRI-experts around different fields of MRI. I personally enjoy that you have the opportunity to present your own work and get feedback among different experts in the field of MRI. What I have observed during my PhD is that there are not many possibilities to presents your work outside of your facility. Therefore, the meeting is a great possibility to train presenting and defending your scientific work in a friendly atmosphere." (Martin Söllradl, Ph.D. Student, Graz)

"As a first time participant I was allowed to present my research and had the possibility for a lot of fruitful discussions. The event was very well organized und had a good mixture of presentation and discussion sessions. The hike together was another possibility to engage with other researchers. I can really recommend participating in this event." (Christian Tinauer, Master Student, Graz)
